Dear Nikki Wilcock,

West Chiltington's Neighbourhood Plan (NP) – Regulation 15 Submission and policy wording query.

Thank you for your consultation on the above dated 14 February 2022.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

Natural England is a statutory consultee in neighbourhood planning and must be consulted on draft neighbourhood development plans by the Parish/Town Councils or Neighbourhood Forums where they consider our interests would be affected by the proposals made.

For general advice, we refer you to the attached annex which covers the issues and opportunities that should be considered when preparing a Neighbourhood Plan.

Comments on proposed NP Water Neutrality wording

*“Development proposals will be supported where the following criteria as applicable, are met:
Demonstrate a commitment to support the delivery of water efficiency measures in line with the emerging HDC Local Plan 2021-38 in order to protect the Arun Valley SAC/ SPA/Ramsar.”*

This wording appears to address the concerns regarding potential European site detrimental impact.

“Developers are advised to engage in pre-application discussions with Southern Water to evaluate whether changes to the Hardham abstraction would have any impacts for the timing of delivery of their developments in order to keep pace with infrastructure investment.”

This wording, however, is not acceptable as the details are not specific enough to demonstrate water neutrality.

Habitats Regulations Assessment

Although neighbourhood plans themselves do not grant planning permission for development, they are subject to compliance with The Conservation of Species and Habitats Regulations 2017 as the regulations apply to any plan as well as any developments requiring planning permission. This includes the *Habitat Regulations 2017*. This means that in order to consider water neutrality, your NP requires assessment under the Habitats Regulation. We note that in recognition of this requirement, the local planning authority are offering assistance with this process, as stated in this extract from their website:

“HDC recognise that all Neighbourhood Plans currently being prepared are being required to take account of Water Neutrality at a late stage in the plan preparation process. HDC will therefore undertake the additional screening and appropriate assessment process on behalf of the affected parishes. As this work is complex we will appoint specialist consultants to assist with this work. We will liaise with the affected parishes directly about this process.”

Please also see the following advice regarding NP assessment, that we hope will also be useful:

We note that no new sites are specifically allocated for development within the West Chiltington Neighbourhood Plan. Subject to information on the allocations and the avoidance and mitigation measures within the Local Plan being sufficient to ensure that the overarching Local Plan policies and allocations do not result in significant environmental effects (as tested via the Sustainability Appraisal and Habitats Regulations Assessment) Natural England would advise that the Neighbourhood Plan in the absence of development is unlikely to have a significant effect. However, any allocated sites will need to conform to the requirements of the Horsham Local Plan and be subject to a project level HRA.

New development is considered to be any relevant project requiring a public water supply from Southern Water's Sussex North Water Supply Zone but is likely to be dominated by large planning applications. The decision on whether the 2017 Regulations apply to a specific project will be a matter for the relevant Competent Authority (usually the local planning authority). However, the 2017 Regulations are likely to apply to any development which could materially increase water consumption. This could include dwellings, office, commercial and educational development among others.

For any questions relating to the above advice, please contact me, Rebecca.Bishop@naturalengland.org.uk. For further consultations on your plan, please contact: consultations@naturalengland.org.uk.

Yours sincerely,

Rebecca Bishop

Sustainable Development Adviser – Sussex & Kent Team

Annex 1 - Neighbourhood planning and the natural environment: information, issues and opportunities

Natural environment information sources

The [Magic](#)¹ website will provide you with much of the nationally held natural environment data for your plan area. The most relevant layers for you to consider are: **Agricultural Land Classification, Ancient Woodland, Areas of Outstanding Natural Beauty, Local Nature Reserves, National Parks (England), National Trails, Priority Habitat Inventory, public rights of way (on the Ordnance Survey base map) and Sites of Special Scientific Interest (including their impact risk zones)**. Local environmental record centres may hold a range of additional information on the natural environment. A list of local record centres is available [here](#)².

Priority habitats are those habitats of particular importance for nature conservation, and the list of them can be found [here](#)³. Most of these will be mapped either as **Sites of Special Scientific Interest**, on the Magic website or as **Local Wildlife Sites**. Your local planning authority should be able to supply you with the locations of Local Wildlife Sites.

National Character Areas (NCAs) divide England into 159 distinct natural areas. Each character area is defined by a unique combination of landscape, biodiversity, geodiversity and cultural and economic activity. NCA profiles contain descriptions of the area and statements of environmental opportunity, which may be useful to inform proposals in your plan. NCA information can be found [here](#)⁴.

There may also be a local **landscape character assessment** covering your area. This is a tool to help understand the character and local distinctiveness of the landscape and identify the features that give it a sense of place. It can help to inform, plan and manage change in the area. Your local planning authority should be able to help you access these if you can't find them online.

If your neighbourhood planning area is within or adjacent to a **National Park** or **Area of Outstanding Natural Beauty (AONB)**, the relevant National Park/AONB Management Plan for the area will set out useful information about the protected landscape. You can access the plans on from the relevant National Park Authority or Area of Outstanding Natural Beauty website.

General mapped information on **soil types** and **Agricultural Land Classification** is available (under 'landscape') on the [Magic](#)⁵ website and also from the [LandIS website](#)⁶, which contains more information about obtaining soil data.

Natural environment issues to consider

The [National Planning Policy Framework](#)⁷ sets out national planning policy on protecting and enhancing the natural environment. [Planning Practice Guidance](#)⁸ sets out supporting guidance.

Your local planning authority should be able to provide you with further advice on the potential impacts of your plan or order on the natural environment and the need for any environmental assessments.

Landscape

Your plans or orders may present opportunities to protect and enhance locally valued landscapes. You may want to consider identifying distinctive local landscape features or characteristics such as ponds, woodland or dry stone walls and think about how any new development proposals can respect and enhance local landscape character and distinctiveness.

If you are proposing development within or close to a protected landscape (National Park or Area of Outstanding Natural Beauty) or other sensitive location, we recommend that you carry out a landscape assessment of the proposal. Landscape assessments can help you to choose the most appropriate sites for development and help to avoid or minimise impacts of development on the landscape through careful siting, design and landscaping.

Wildlife habitats

Some proposals can have adverse impacts on designated wildlife sites or other priority habitats (listed [here](#)⁹), such as Sites of Special Scientific Interest or [Ancient woodland](#)¹⁰. If there are likely to be any adverse impacts you'll need to think about how such impacts can be avoided, mitigated or, as a last resort, compensated for.

Priority and protected species

You'll also want to consider whether any proposals might affect priority species (listed [here](#)¹¹) or protected species. To help you do this, Natural England has produced advice [here](#)¹² to help understand the impact of particular developments on protected species.

Best and Most Versatile Agricultural Land

Soil is a finite resource that fulfils many important functions and services for society. It is a growing medium for food, timber and other crops, a store for carbon and water, a reservoir of biodiversity and a buffer against pollution. If you are proposing development, you should seek to use areas of poorer quality agricultural land in preference to that of a higher quality in line with National Planning Policy Framework para 171. For more information, see our publication [Agricultural Land Classification: protecting the best and most versatile agricultural land](#)¹³.

Improving your natural environment

Your plan or order can offer exciting opportunities to enhance your local environment. If you are setting out policies on new development or proposing sites for development, you may wish to consider identifying what environmental features you want to be retained or enhanced or new features you would like to see created as part of any new development. Examples might include:

- Providing a new footpath through the new development to link into existing rights of way.
- Restoring a neglected hedgerow.
- Creating a new pond as an attractive feature on the site.
- Planting trees characteristic to the local area to make a positive contribution to the local landscape.
- Using native plants in landscaping schemes for better nectar and seed sources for bees and birds.
- Incorporating swift boxes or bat boxes into the design of new buildings.
- Think about how lighting can be best managed to encourage wildlife.
- Adding a green roof to new buildings.

¹³ <http://publications.naturalengland.org.uk/publication/35012>

You may also want to consider enhancing your local area in other ways, for example by:

- Setting out in your plan how you would like to implement elements of a wider Green Infrastructure Strategy (if one exists) in your community.
- Assessing needs for accessible greenspace and setting out proposals to address any deficiencies or enhance provision.
- Identifying green areas of particular importance for special protection through Local Green Space designation (see [Planning Practice Guidance on this](#) ¹⁴).
- Managing existing (and new) public spaces to be more wildlife friendly (e.g. by sowing wild flower strips in less used parts of parks, changing hedge cutting timings and frequency).
- Planting additional street trees.
- Identifying any improvements to the existing public right of way network, e.g. cutting back hedges, improving the surface, clearing litter or installing kissing gates) or extending the network to create missing links.
- Restoring neglected environmental features (e.g. coppicing a prominent hedge that is in poor condition, or clearing away an eyesore).
